REST API for Blog APPLICATION

System Requirements Specification

1 PROJECT ABSTRACT

Blog Application is Spring boot RESTful application with MySQL, where it allows to manage the blogs and can post comments on the blog.

Following is the requirement specifications:

	Blog Application
Modules	
1	Blogs
2	Comments
Blog Module	
Functionalities	
1	Create a Blog
2	Update a Blog
3	Delete a Blog
4	Get the Blog by Id
Comment Module	
Functionalities	
1	Post a comment on the Blog

2 ASSUMPTIONS, DEPENDENCIES, RISKS / CONSTRAINTS

2.1 BLOG CONSTRAINTS:

- While fetching the Blog by Id, if Id does not exist then operation should throw custom exception.
- While Updating the Blog by Id, if Id does not exist then operation should throw custom exception
- While deleting the Blog by Id, if Id does not exist then operation should throw custom exception

2.2 COMMENT CONSTRAINTS

• If you want to post a comment on a blog, if blog id does not exists, then operation should throw a custom exception.

Common Constraints

- For all rest endpoints receiving @RequestBody, validation check must be done and must throw custom exception if data is invalid
- All the business validations must be implemented in dto classes only.
- All the database operations must be implemented on entity object only
- Do not change, add, remove any existing methods in service layer
- In Repository interfaces, custom methods can be added as per requirements.
- All RestEndpoint methods and Exception Handlers must return data wrapped in ResponseEntity

3 Business Validations

- Blog title is not null, min 3 and max 100 characters.
- Blog content is not null, min 3, max 200 characters.
- Comment blog id is not null.
- Comment comment is not null, min 3 and max 200 characters.

4 REST ENDPOINTS

Rest End-points to be exposed in the controller along with method details for the same to be created

4.1 BOOKSCONTROLLER

URL	Exposed	Purpose		
1. /api/blogs		Successful Blog creation Response code: 201		
Http Method	POST	(Created)		
Parameter 1	BlogDto	If title or content is blank then Response		
Return	BlogDto	code: 400 (Bad request)		
/api/blogs/{id}		If blog id is valid then Response code: 200		
Http Method	GET	(OK)		
Parameter 1	Long(id)	If blog id is invalid then Response code: 404		
Return	BlogDto	(Not Found)		
/api/blogs/{id}		For valid blog id Response code: 200 (OK)		
Http Method	PUT	For invalid blog id:		
Parameter 1	Long(Id)	404 (Not Found)		
Parameter 2	BlogDto			
Return	BlogDto			
/api/blogs/{id}		For valid blog id Response code: 200 (OK)		
Http Method	DELETE	For invalid blog id:		
Parameter 1	Long(Id)	404 (Not Found)		
Return	Boolean			

/api/blogs/comment	t .	For valid blog id Response code: 200 (OK)
Http Method	POST	For invalid blog id:
Parameter 1	CommentDto	404 (Not Found)
Return	CommentDto	

5 TEMPLATE CODE STRUCTURE

5.1 PACKAGE: COM.IIHT.TRAINING.BLOGS

Resources

SpringbootBlogsServiceApplication	This is the Spring Boot starter	Already Implemented.
(Class)	class of the application.	You are free to add
		any bean in this class.

5.2 PACKAGE: COM.IIHT.TRAINING.BLOGS.ENTITY

Class/Interface	Description	Status	
BlogEntity (class)	 Annotate this class with proper annotation to declare it as an entity. class with id as primary key. You can use javax package for annotations. Map this class with blogs table. Generate the id using IDENTITY strategy 	Partially implemented.	
CommentEntity(class)	 This class is partially implemented. Annotate this class with proper annotation to declare it as an entity class with id as primary key. You can use javax package for annotations. Map this class with comments table. Generate the id using the IDENTITY strategy 	Partially implemented.	

5.3 PACKAGE: COM.IIHT.TRAINING.BLOGS.DTO

Resources

Class/Interface	Description	Status
BlogDto (class)	Use appropriate annotations from	Partially implemented.
	the Java Bean Validation API for	
	validating attribute of this class.	
	(Refer Business Validation section	
	for validation rules).	
CommentDto (class)	Use appropriate annotations from	Partially implemented.
	the Java Bean Validation API for	
	validating attribute of this class.	
	(Refer Business Validation section	
	for validation rules).	

5.4 PACKAGE: COM.IIHT.TRAINING.BLOGS.REPOSITORY

Class/Interface		Description	Status
BlogRepository (interface)	1.	Repository interface exposing	Already implemented
		CRUD functionality for Blog	
		Entity.	
	2.	You can go ahead and add any	
		custom methods as per	
		requirements	
CommentRepository	1.	Repository interface exposing	Already implemented
(interface)		CRUD functionality for	
		Comment Entity.	
	2.	You can go ahead and add any	
		custom methods as per	
		requirements	

5.5 PACKAGE: COM.IIHT.TRAINING.BLOGS.SERVICE

Resources

Class/Interface	Description	Status
BlogService (interface)	Interface to expose method	Already implemented.
	signatures for Blog related	
	functionality.	
	Do not modify, add or delete any	
	method	
CommentService	Interface to expose method	Already implemented.
(interface)	signatures for Comments related	
	functionality.	
	Do not modify, add or delete any	
	method	

5.6 PACKAGE: COM.IIHT.TRAINING.BLOGS.SERVICE.IMPL

Class/Interface		Description	1		Status
BlogServiceImpl (class)		Implements	S	BlogService.	To be implemented.
		Contains	templa	te method	
		implementa	ation.		
	•	Need	to	provide	
		implementa	ation fo	r Blog related	
		functionalit	ies		
	•	Add red	quired	repository	
		dependenc	У		
	•	Do not mod	lify, add	or delete any	
		method sig	nature		

CommentServiceImpl (class)	•	Implements CommentService.	To be implemented.
		Contains template method	
		implementation.	
	•	Need to provide	
		implementation for student	
		related functionalities	
	•	Add required repository	
		dependency	
	•	Do not modify, add or delete any	
		method signature	

5.7 PACKAGE: COM.IIHT.TRAINING.BLOGS.EXCEPTION

Class/Interface	Description	Status
GlobalHandler (class)	• RestControllerAdvice Class for	Partially implemented.
	defining global exception	
	handlers.	
	• Contains Exception Handler for	
	InvalidDataException class.	
	• Use this as a reference for	
	creating exception handler for	
	other custom exception classes	
ExceptionResponse (class)	• Object of this class is supposed to	Already implemented.
	be returned in case of exception	
	through exception handlers	

Class/Interface	Description	Status

•	Custom Exception to be	Already created.
	thrown when trying to get	
	the blog details.	
•	Need to create Exception	
	Handler for same wherever	
	needed (local or global)	
	•	the blog details.Need to create Exception Handler for same wherever

5.8 PACKAGE: COM.IIHT.TRAINING.BLOGS.CONTROLLER

Class/Interface	Description	Status
BlogController (Class)	• Controller class to expose all rest-	To be implemented
	endpoints for Blog and Comment	
	related activities.	
	• May also contain local exception	
	handler methods	

- 1. All actions like build, compile, running application, running test cases will be through Command Terminal.
- 2. To open the command terminal the test takers, need to go to Application menu (Three horizontal lines at left top) -> Terminal -> New Terminal
- 3. To build your project use command:

mvn clean package

4. To launch your application, move into the target folder (cd target). Run the following command to run the application:

java -jar springboot-blogs-service-0.0.1-SNAPSHOT.jar

5. This editor Auto Saves the code

- 6. If you want to exit(logout) and continue the coding later anytime (using Save & Exit option on Assessment Landing Page) then you need to use CTRL+Shift+B-command compulsorily on code IDE. This will push or save the updated contents in the internal git/repository. Else the code will not be available in the next login.
- 7. These are time bound assessments the timer would stop if you logout and while logging in back using the same credentials the timer would resume from the same time it was stopped from the previous logout.
- 8. To test any Restful application, the last option on the left panel of IDE, you can find ThunderClient, which is the lightweight equivalent of POSTMAN.
- 9. This is a web-based application, to run the application on a browser, use the internal browser in the workspace. Click on the second last option on the left panel of IDE, you can find Browser Preview, where you can launch the application.

Note: The application will not run in the local browser

10. Default credentials for MySQL:

a. Username: root

b. Password: pass@word1

- 11. To login to mysql instance: Open new terminal and use following command:
 - a. sudo systemctl enable mysql
 - b. sudo systemctl start mysql

NOTE: After typing any of the above commands you might encounter any warnings.

>> Please note that this warning is expected and can be disregarded. Proceed to the next step.

c. mysql -u root -p

The last command will ask for password which is 'pass@word1'

- 12. Mandatory: Before final submission run the following command: mvn test
- 13. You need to use CTRL+Shift+B command compulsorily on code IDE, before final submission as well. This will push or save the updated contents in the internal git/repository, and will be used to evaluate the code quality.
